Simply the best motor in the business.

The CentriPro™ submersible motor is setting the new industry standard for reliability and performance. Ideally suited for 4-inch residential water wells, the CentriPro is available in 2-wire and 3-wire models.

• **Quieter** - the 2-wire Permanent Split Capacitor (PSC) design reduces noise and vibration
• **Lower current** - the 2-wire models draw up to 20% fewer amps than split-phase motors
• **Longer life** - 304 stainless steel shell and end bells at top and bottom for maximum corrosion resistance
• **Stronger** - laser-welded for superior strength; three-shoe, Kingsbury-type thrust bearing with 700-lb. thrust rating - much higher than competitive motors

Don’t take chances. Discover the CentriPro difference.
