I. SCOPE
The contractor shall provide ______ (quantity) close coupled, end suction centrifugal pump unit/s, Model 3656 M&L-Group as manufactured by Goulds Water Technology or equal.
All pump units shall be of one manufacturer and provided complete including electric motor drive.

II. CONDITIONS OF SERVICE
A. Equipment item number
B. Flange Inside Diameter
   Suction (inches) FF
   Discharge (inches) FF
C. Primary Service Condition
   Capacity (GPM)
   Total Head (feet)
   Efficiency (%)
D. Minimum Total Head at Shutoff (feet)
E. Maximum Impeller Diameter (inches)
F. Operating Speed (RPM)
G. Maximum Motor HP

III. PUMP CONSTRUCTION
Each pump shall be designed for clockwise rotation viewed from driven end and include the following design features.

A. PUMP END COMPONENTS
   A.1. Casing
      The pump casing shall be spiral volute type, back pull-out design with ANSI Class 150 flat faced flanged suction and discharge connections above 2½" size and shall be constructed of Cast Iron, ASTM A48 CL30 material.
      The pump discharge nozzle shall be tangentially oriented.
      The complete pump unit shall be supported by the power frame.
      A pump casing drain shall be provided with a (zinc plated steel) pipe plug.

   A.2. Wear Ring
      Replaceable casing and seal housing wear ring of ________, (Cast Iron ASTM A48 CL20 or Lead Free Bismuth Bronze) shall be provided and held securely by means of interference fits.
A.3. Impeller
The pump impeller shall be of enclosed design, constructed of (Cast Iron ASTM A48 CL20 or Lead Free Sil-Brass ASTM B584) material and key driven. A stainless steel bolt and washer shall provide positive attachment of the impeller to the motor shaft.

A.4. Seal Housing/Adapter
The seal housing and motor adapter shall be of 1-piece design, constructed of Cast Iron, ASTM A48 CL20. Registered mating fits to the pump casing and power frame shall maintain positive unit alignment and support. Sealing of casing pressure shall be maintained by an “O-ring” of BUNA-N, EPR or Viton material. Motor and casing connection shall be held securely by means of grade 5, high strength hex cap screws.
A bottom drainage port shall be provided to allow condensation or seal leakage to drain and not be retained within the adapter.

A.5. Mechanical Seal
The pump shaft seal shall be a John Crane Type 21 mechanical seal or equal constructed of the following materials. Packed box shaft sealing is also available.

<table>

A.6. Shaft Sleeve
The pump shaft sleeve shall be constructed of AISI Type 303 stainless steel and shall be of the hook type design, locked in place by the impeller without necessity of other mechanical locking devices.

IV. ELECTRIC MOTOR
The pump drive motor shall be non-overloading of NEMA standard design JM-frame suitable for horizontal mounting and close coupled to the pump unit as described above.
The motor rating shall be:

_________ HP, _________ RPM
_________ phase, _________ Hz, _________ volts
Totally enclosed, fan cooled enclosure
1.15 Service Factor
High Efficiency

V. TESTING
A. Each pump casing shall be hydrostatically tested by the manufacturer in accordance with Hydraulic Institute Standards at 250 PSIG.
B. Production performance testing will be conducted by the manufacturer on each pump unit. Head at three operating points (70% of BEP, BEP and 120% of BEP) will be measured at design speed to verify performance.
