1 Introduction and Safety

1.1 Introduction

1.1.1 Purpose of this manual

This manual provides information on how to do the following in the correct manner:
• Installation
• Operation
• Maintenance.

CAUTION:
This manual is an integral part of the unit. Make sure to have read and understood the manual before installing the unit and putting it to use. The manual must always be made available to the user, stored in the proximity of the unit, and well kept.

1.1.2 Supplementary instructions

The instructions and warnings of this manual apply to the standard unit as described in the sale documentation. Special version pumps may be supplied with supplementary instruction manuals. For situations not considered in the manual or in the sales document, contact Xylem or the Authorised Distributor.

1.2 Safety

1.2.1 Danger levels and safety symbols

Before using the unit, the user must read, understand and comply with the indications of the danger warnings in order to avoid the following risks:
• Injuries and health hazards
• Damage to the unit
• Unit malfunction.

Danger levels

<table>
<thead>
<tr>
<th>Hazard level</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DANGER:</strong></td>
<td>It identifies a dangerous situation which, if not avoided, causes serious injury, or even death.</td>
</tr>
<tr>
<td><strong>WARNING:</strong></td>
<td>It identifies a dangerous situation which, if not avoided, may cause serious injury, or even death.</td>
</tr>
<tr>
<td><strong>CAUTION:</strong></td>
<td>It identifies a dangerous situation which, if not avoided, may cause small or medium level injuries.</td>
</tr>
<tr>
<td><strong>NOTICE:</strong></td>
<td>It identifies a situation which, if not avoided, may cause damage to property but not to people.</td>
</tr>
</tbody>
</table>

1.2.2 User safety

Strictly comply with current health and safety regulations.

**WARNING:**

This unit must be used only by qualified users. Qualified users are people able to recognise the risks and avoid hazards during installation, use and maintenance of the unit.

Inexperienced users

**WARNING:**

For EU countries: this appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge, provided that they are being supervised and have been instructed on the use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be carried out by children without supervision.

**WARNING:**

For countries outside the EU: this appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they are being supervised and have been instructed on the use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

1.2.3 Protection of the environment

Disposal of packaging and product

Comply with the current regulations on sorted waste disposal.

Leaking of fluid

If the unit contains lubricating fluid, take appropriate measures to prevent the dispersion of leaks into the environment.
1.2.4 Sites exposed to ionizing radiations

WARNING: Ionizing radiation hazard
If the unit has been exposed to ionizing radiations, implement the necessary safety measures for the protection of people. If the unit needs to be despatched, inform the carrier and the recipient accordingly, so that appropriate safety measures can be put in place.
2 Transport and storage

2.1 Handling of the packed unit

WARNING: Crushing hazard (limbs)
The unit and its components may be heavy: risk of crushing.

WARNING:
Always wear personal protective equipment.

WARNING:
Check the gross weight marked on the packaging.

WARNING:
Handle the unit in compliance with the current regulations on "manual load handling", to avoid undesirable ergonomic conditions causing risks of back-spine injury.

WARNING:
Take appropriate measures during transport, installation and storage to prevent contamination from external substances.

Depending on the model, the Manufacturer delivers the unit and its components in:
1. A cardboard box, or
2. A cardboard box with wooden base.
The type 2 packaging is intended for transport with a forklift truck; the lifting points are indicated in the figure.

Figure 1: Packed product lifting points
2.2 Unit inspection upon delivery

2.2.1 Inspect the package

1. Check that quantity, descriptions and product codes match the order.
2. Check the packaging for any damage or missing components.
3. In case of immediately detectable damage or missing parts:
   - accept the goods with reserve, indicating any findings on the transport document, or
   - reject the goods, indicating the reason on the transport document.

In both cases, promptly contact Xylem or the Authorised Distributor from whom the product was purchased.

2.2.2 Unpacking and inspection of the unit

CAUTION: Cut and abrasion hazard
Always wear personal protective equipment.

1. Remove packing materials from the product.
2. Release the unit by removing the screws and/or cutting the straps, if fitted.
3. Check the unit for integrity and to make sure that there are no missing components.
4. In case of damage or missing components, promptly contact Xylem or the Authorised Distributor.

2.3 Unit handling

The unit must be harnessed and lifted as shown in the figure.

![Figure 2: Lifting of the unit](image_url)

WARNING:
Use cranes, ropes, lifting straps, hooks and clasps that comply with current regulations and that are suitable for the specific use.

NOTICE:
Make sure that the harnessing does not hit and/or damage the unit.
2 Transport and storage

WARNING:
Lift and handle the unit slowly to avoid stability issues.

WARNING:
During handling, make sure to avoid injury to people and animals, and/or damage to property.

2.4 Storage

2.4.1 Storage of the packed unit

The unit must be stored:
- In a covered and dry place
- Away from heat sources
- Protected from dirt
- Protected from vibrations
- At an ambient temperature between -40°C and +60°C (-40°F and 140°F), and relative humidity between 5% and 95%.

NOTICE:
Do not place heavy loads on top of the unit.

NOTICE:
Protect the unit from collisions.

WARNING:
Take appropriate measures during transport, installation and storage to prevent contamination from external substances.

2.4.2 Long-term storage of the unit

1. Follow the same instructions for the storage of the packed unit.
2. Empty the unit by removing the drain plug. This operation is essential in exceptionally cold environments; any residual liquid in the unit could otherwise have an adverse effect on its condition and performance.

Figure 3: Drain plug

For further information about preparation for long-term storage, please contact Xylem or the Authorised Distributor.
3 Product Description

3.1 Designation

Multistage horizontal centrifugal pump unit with threaded ports, non-self-priming.

3.2 Data plate

The data plate is a label showing:
- The main unit details
- Identification code

### 3.2.1 Marks of safety approval

The presence of an electric safety approval mark, for example IMQ, TUV, IRAM, only refers to the pump unit.

---

³ In case of no further special configuration characters on the right, this character will be nil, otherwise it will be "X"

3.4 Intended use

- Pressure boosting and water supply systems
- Washing and cleaning sector, including washing of vehicles
- Circulation of hot and cold liquids, for example water or water & glycol, for heating, cooling and air conditioning systems
- Water treatment applications
- Handling of moderately aggressive liquids.

3.4.1 Pumped liquids

- Hot water
- Cold water
• Clean liquids
• Fluids chemically and mechanically compatible with the materials of the pump unit.
Observe the operating limits in Technical references on page 34.

3.5 Improper use

WARNING:
The unit was designed and built for the use described in the section Intended Use. Any other use is prohibited, as it could compromise the safety of the user and the efficiency of the unit itself.

DANGER:
It is prohibited to use this unit to pump flammable and/or explosive liquids.

DANGER: Potentially explosive atmosphere hazard
It is prohibited to start the unit in environments with potentially explosive atmospheres or with combustible dusts.

3.5.1 Examples of improper use
• Pumping liquids not compatible with the construction materials of the unit
• Pumping hazardous, toxic, explosive, flammable or corrosive liquids
• Pumping drinking liquids other than water, for example wine or milk
• Pumping liquids containing abrasive, solid, or fibrous substances
• Using the unit for flow rates exceeding the flow rate indicated in the data plate.

3.5.2 Examples of improper installation
• Explosive and corrosive atmospheres
• Areas where the air temperature is very high and/or there is poor ventilation
• Outdoor without protection from weather conditions.

3.6 Use in water distribution networks for human consumption
If the unit is intended for water supply to people and/or animals:

WARNING:
It is prohibited to pump drinking water after use with other fluids.

WARNING:
Take appropriate measures during transport, installation and storage to prevent contamination from external substances.

WARNING:
Remove the unit from its packaging just before installation to prevent contamination from external substances.
WARNING:
After installation, run the unit for a few minutes with several users open in order to wash the inside of the system.
4  Installation

4.1 Precautions

Make sure you have read and understood the safety instructions in the Introduction and Safety chapter before starting work.

WARNING:
Always wear personal protective equipment.

WARNING:
Always use suitable working tools.

WARNING:
When selecting the place of installation and connecting the unit to the hydraulic and electric power supplies, strictly comply with current regulations.

WARNING:
When connecting the unit to a public or private aqueduct, or to a well for the supply of water for human and/or animal consumption:

WARNING:
It is prohibited to pump drinking water after use with other fluids.

WARNING:
Remove the unit from its packaging just before installation to prevent contamination from external substances.

WARNING:
Observe all the provisions of the authorities and companies concerned.

4.2 Mechanical installation

4.2.1 Installation area

- If possible, place the unit in a raised position in relation to the floor.
- Make sure that any leaks will not cause flooding to the installation area or submerge the unit.
- Observe the instructions given in Operating environment on page 34.

Air clearance between a wall and the motor fan grille

- To ensure suitable ventilation: ≥ 100 mm.
- To permit inspection and removal of the motor: ≥ 300 mm. If the space available is any less, refer to the technical catalogue.
4.2.2 Permitted positions

4.2.3 Fastening of the unit

1. If present, remove the plugs covering the suction and discharge ports.
2. Place the unit on a level and sturdy surface.
3. Using a spirit level, make sure that the unit is level.
4. Align the suction and discharge ports to their piping.
5. Fasten the units using bolts (4 or 6 depending on the model), tightening at a torque of 10 Nm (88 lbf-in).

**NOTICE:**
Only for models with body with sleeve, if the temperature of the pumped liquid exceeds 50°C (122°F), only fasten bolts A; see the figure below.

4.2.4 Reducing vibrations

The motor and the flow of liquids in the pipes may cause vibrations, which can be exacerbated by incorrect installation of the unit and pipes. See *Hydraulic connection* on page 18.
4.3 Hydraulic connection

**DANGER:**
All the hydraulic and electrical connections must be completed by a technician possessing the technical-professional requirements outlined in the current regulations.

**WARNING:**
Piping must be sized to ensure safety at the maximum operating pressure.

**WARNING:**
Install appropriate seals between the unit couplings and the pipings.

4.3.1 Guidelines for the hydraulic system

Refer to the representative hydraulic diagrams; see the figures below.

Figure 10: Positive suction head installation diagram

Figure 11: Suction lift installation diagram
<table>

<tr>
<td>7</td>
<td>Check valve</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1. Do not install the unit at the lowest point of the system, to avoid the accumulation of sediments.
2. Install an automatic relief valve at the highest point of the system to eliminate air bubbles.
3. Remove any welding residues, deposits and impurities in the pipes that could damage the unit; install a filter if necessary.
4. Support the pipes independently to prevent them from weighing on the unit.
5. To reduce the transmission of vibrations between the unit and the system and vice versa, install:
   - anti-vibration joints on the suction and discharge sides of the unit
   - dampers between the unit and the surface on which it is installed.
6. In order to reduce flow resistance, the pipe on the suction side must be:
   - As short and as straight as possible
   - For the section connected to the unit, straight and without bottlenecks, covering a length equal to at least six times the diameter of the suction port
   - Wider than the suction port; if necessary, install an eccentric reducer that is horizontal on top
   - Without bends; if this cannot be avoided, bends of a radius as wide as possible
   - Without traps and ‘goosenecks’
   - With valves with a low specific flow resistance.

7. Install a check valve on the discharge side to prevent the liquid from flowing back into the pump unit when this is at standstill.
8. Install a pressure gauge (or a vacuum pressure gauge, in the case of suction lift installation) on the suction side, and a pressure gauge on the discharge side, for checking the actual operating pressure of the pump unit.
9. To exclude the unit from the system for the purpose of maintenance, install:
   - An on-off valve on the suction side
   - An on-off valve on the discharge side, downstream of the check valve and pressure gauge, also useful for regulating the flow rate.
10. On the suction side, install a device to prevent the absence of liquid (float or probes), or a minimum pressure device.
11. Sufficiently submerge the end of the suction pipe in the liquid, in order to prevent any air from penetrating through the suction vortex when the level is at the minimum.
12. In case of suction lift installation, the suction pipe must have an increasing slope towards the unit exceeding 2%; to avoid air pockets; also install:
- A foot valve that guarantees full opening (full section)
- A filling on-off valve to facilitate the removal of the air and priming.

### 4.4 Electrical connection

**DANGER:**
All the hydraulic and electrical connections must be completed by a technician possessing the technical-professional requirements outlined in the current regulations.

**DANGER: Electrical hazard**
Before starting work, check that the unit is unplugged and that the pump unit, the control panel and the auxiliary control circuit cannot restart, even unintentionally.

#### 4.4.1 Ground

**DANGER: Electrical hazard**
Always connect the external protection conductor (ground) to the ground terminal before attempting to make any other electrical connections.

**DANGER: Electrical hazard**
Connect all the electrical accessories of the pump unit and motor to the ground.

**DANGER: Electrical hazard**
Check that the external protection conductor (ground) is longer than the phase conductors; In case of accidental disconnection of the unit from the phase conductors, the protection conductor must be the last one to detach itself from the terminal.

**DANGER: Electrical hazard**
Install suitable systems for protection against indirect contact, in order to prevent lethal electric shocks.

#### 4.4.2 Guidelines for electrical connection

1. Check that the electrical leads are protected against:
   - High temperature
   - Vibrations
   - Collisions.
2. Check that the power supply line is provided with:
   - A short circuit protection device of appropriate size
   - A mains isolator switch with a contact gap of at least 3 mm.

#### 4.4.3 Guidelines for the electric panel

**NOTICE:**
The electric panel must match the ratings on the unit data plate. Improper combinations could damage the motor.
1. The electric panel must protect the motor against overloading and short circuits; install a suitable device (thermal relay or overload cut-out switch; see the table).
2. Fit the electric panel with a system for protection against dry running to which a pressure switch (or float switch, probes, or other suitable devices) must be connected.
3. Install these devices on the suction side:
   - A pressure switch, in the case of connection to the mains water supply
   - A float switch or probes, in the case of liquid drawn from a tank or basin.
4. When thermal relays are used, the type sensitive to phase failure is recommended.

<table>
<thead>
<tr>
<th>Pump unit</th>
<th>Protection</th>
</tr>
</thead>
</table>
| Single phase standard ≤ 1.5 kW| • Automatic reset thermal-ampere protection, in-built (motor protector)  
                                     • From short circuit, to be supplied by the installer⁴. |
| Three-phase and single-phase⁵ | • Thermal, must be supplied by the installer  
                                     • Short circuit, must be supplied by the installer. |

### 4.4.4 Motor guidelines

**WARNING: Injuries hazard**

The unit, equipped with a single-phase motor with automatic reset thermal overload protection, could restart inadvertently after it has cooled down: risk of physical injury.

1. Open the terminal box cover.
2. Connect the power supply conductor; see the figure below, or the wiring diagram shown inside the terminal box cover.
3. Connect the protection conductor (ground), making sure that it is longer than the phase conductors.
4. Connect the phase leads.
5. Close the terminal box cover and tighten all the screws and cable glands.

![Figure 12: Electrical connection and tightening torques](image)

⁴  aM fuses (motor start-up), or thermal magnetic switch with C curve and Icn ≥ 4.5 kA, or other similar device

⁵  Trip class 10 A overload thermal relay + aM fuses (motor starting), or start class 10 A motor protection thermal magnetic switch
Motor without automatic reset thermal overload protection

1. If the motor is used with full load, then set the value to the nominal current value on the data plate of the pump unit.

2. If the motor is used with partial load, then set the value of the operating current measured with a current pincer.

3. For three-phase motors with star-delta starting system, set the thermal relay downstream of the switching circuit at 58% of the rated or operating current.

### 4.4.5 Operation with frequency converter

The three-phase motors can be connected to a frequency converter for speed control.

- The converter exposes the insulation of the motor to a greater load determined by the length of the connecting cable: observe the requirements of the Manufacturer of the frequency converter
- For applications requiring silent operation, install an outlet filter between the motor and the converter; a sinusoidal filter can reduce the noise even further
- The bearings of the motors, from size 315 S/M and up, are exposed to the risk of harmful currents: use electrically insulated bearings.
- The conditions of installation must guarantee protection against voltage peaks between the terminals and/or dV/dt in the table:

<table>
<thead>
<tr>
<th>Motor size</th>
<th>Voltage peak [V]</th>
<th>dV/dt [V/µs]</th>
</tr>
</thead>
<tbody>
<tr>
<td>up to 90R (500 V)</td>
<td>&gt; 650</td>
<td>&gt; 2200</td>
</tr>
<tr>
<td>from 90R to 180R</td>
<td>&gt; 1400</td>
<td>&gt; 4600</td>
</tr>
<tr>
<td>over 180R</td>
<td>&gt; 1600</td>
<td>&gt; 5200</td>
</tr>
</tbody>
</table>

Otherwise, use a motor with reinforced insulation \(^6\) and a sinusoidal filter.

---

\(^6\) Available on request
5 Operation

5.1 Precautions

**WARNING: Injuries hazard**
Check that the protection devices of the coupling are installed, when applicable: risk of physical injury.

**WARNING:**
Make sure that the drained liquid cannot cause damage or injuries.

**WARNING: Electrical hazard**
Check that the unit is properly connected to the mains power supply.

**WARNING: Injuries hazard**
The unit, equipped with a single-phase motor with automatic reset thermal overload protection, could restart inadvertently after it has cooled down: risk of physical injury.

**WARNING: Hot surface hazard**
Be aware of the extreme heat generated by the unit.

**WARNING:**
It is prohibited to put combustible materials near the unit.

**NOTICE:**
Check that the shaft can turn smoothly.

**NOTICE:**
It is prohibited to operate the unit when dry, not primed and below the minimum rated flow rate.

**NOTICE:**
it is prohibited to operate the unit with the on-off valves on the suction and discharge sides closed.

**NOTICE:**
It is prohibited to use the unit in the case of cavitation.

**NOTICE:**
The unit must be filled and vented properly before it can be started.
**5.2 Filling - Priming**

**NOTICE:**
The maximum pressure of the unit at the discharge, at the discharge side, determined by the pressure available on the suction side, must not exceed the maximum pressure (PN).

**5.2.1 Positive suction head installation**

**WARNING:**
In the case of liquids that are excessively hot or cold, pay attention to the risk of injury.

1. Close the on-off valve on the suction (C) and discharge (A) side.
2. Loosen the filling plug (B).
3. Slowly open the on-off valve (C) until the liquid regularly comes out from the filling hole; if necessary, loosen the plug further (B).
4. Replace the plug (B).
5. Open both the on-off valves slowly and fully.

![Figure 13: Positive suction head installation priming](image)

**5.2.2 Suction lift installation**

**WARNING:**
In the case of liquids that are excessively hot or cold, pay attention to the risk of injury.

1. Close the on-off valve (A) on the discharge side.
2. Remove the filling plug (B).
3. Fill the pump unit until the liquid comes out of the hole.
4. Wait a few minutes and top up with more liquid if necessary.
5. Remove any air that might be present through the relief valve of the suction pipes (see [Guidelines for the hydraulic system](#) on page 18).
6. Replace the plug (B).
5.3 Checking the direction of rotation (three-phase motors)

Before starting the pump unit:

**NOTICE:**
Check that the shaft can turn smoothly.

1. Locate the arrows on the adapter, coupling or cover to determine the correct direction of rotation of the motor.
2. Start the pump unit.
3. Check the direction of rotation through the coupling protection or through the motor cover.
4. Stop the pump unit.

5.3.1 Wrong rotation direction

1. Disconnect the power supply.
2. Invert two of the three wires of the power cable in the terminal box of the motor or in the control panel.
3. Connect the power supply.
4. Start the pump unit.
5. Check the direction of rotation through the coupling protection, or through the motor fan cover.
6. Stop the pump unit.
5.4 Start-up

NOTICE:
It is prohibited to operate the unit with the discharge on-off valve closed or at zero flow rate: this can cause the liquid to overheat and damage the unit.

NOTICE:
If there is a risk of the unit running at a flow rate below the minimum expected, install a bypass circuit.

NOTICE:
Check that the shaft can turn smoothly.

1. Check that all the operations indicated in Filling - Priming on page 24 and Checking the direction of rotation (three-phase motors) on page 25 have been completed correctly.
2. Shut off the discharge on-off valve almost completely.
3. Fully open the suction on-off valve.
4. Start the unit.
5. Gradually open the on-off valve on the discharge side until it is half open.
6. Wait a few minutes and then fully open the discharge on-off valve.

After the start-up procedure, with the pump unit in operation, check that:

- No liquid is leaking from the unit or pipes
- The maximum pressure of the unit at the discharge, at the discharge side, determined by the pressure available on the suction side, must not exceed the maximum pressure (PN)
- The current absorbed is within the rated limits (calibrate the thermal overload protection of the motor)
- There is no unwanted noise or vibrations
- At zero flow rate, the pressure at the discharge corresponds to the expected nominal pressure
- No vortexes can occur at the end of the suction pipe, at the point of the foot check valve (suction lift installation).

NOTICE:
If the units does not deliver the required pressure, repeat the operations in Filling - Priming on page 24.

WARNING:
After startup, run the unit for a few minutes with several users open in order to wash the inside of the system.

5.4.1 Settling of the mechanical seal

The pumped liquid lubricates the seal faces of the mechanical seal; under normal conditions, a small amount of liquid may leak out. When the unit is run for the first time, or immediately after the seal is replaced, more liquid may temporarily leak out. To help the seal settle and to reduce leaking:

1. Close and open the on-off valve on the discharge line two or three times with the unit running.
2. Stop and start the unit two or three times.
5.5 Stopping

1. Shut the on-off valve located on the discharge line.
2. Stop the pump unit and check that the motor slows down gradually.
3. Gradually re-open the on/off valve and check that the motor remains still.
6  Maintenance

6.1 Precautions

Make sure to read and understand the safety instructions before starting work.

WARNING:
Maintenance must be done by a technician possessing the technical-professional requirements outlined in the current regulations.

WARNING:
Always wear personal protective equipment.

WARNING:
Always use suitable working tools.

WARNING:
In the case of liquids that are excessively hot or cold, pay attention to the risk of injury.

DANGER: Electrical hazard
Before starting work, check that the unit is unplugged and that the pump unit, the control panel and the auxiliary control circuit cannot restart, even unintentionally.

DANGER: Electrical hazard
If the unit is connected to the frequency converter, disconnect the mains power supply and wait at least 10 minutes for the residual current to dissipate.

6.2 Maintenance every 4000 hours of operation or every year

When the first of the two limits is reached:
1. Measure the pressure at zero flow rate and compare it with the pressure measured during initial start-up; if the pressure has decreased by more than 15%, check the condition of impeller, pump body and wear rings.
2. Check the unit for unwanted noise and vibrations.
3. Check that there is no liquid leaking from the unit or pipes.
4. Check that all the screws and bolts of the unit and pipes are properly fastened.
5. Check that the insulation resistance of the motor is greater than 500 MΩ, applying a test voltage of 500 Vdc for 1 minute.
6. Check the terminal board of the motor for any signs of overheating and arc flashes.
7. Check the condition of the motor’s cooling fan and clean it.
6.3 Long periods of inactivity

1. Close the on-off valve on the suction side.
2. Completely empty the unit.
3. Protect the unit against freezing.
4. Before restarting the unit, check that the shaft is rotating freely, without mechanical impediments.

6.4 Ordering spare parts

Identify the spare parts with the product codes directly on the site www.lowara.com/spark.
Contact Xylem or the Authorised Distributor for technical information.
7 Troubleshooting

7.1 Precautions

**WARNING:**
Maintenance must be done by a technician possessing the technical-professional requirements outlined in the current regulations.

**WARNING:**
Observe the safety requirements in the chapters on Operation and Maintenance.

**WARNING:**
If a fault cannot be corrected or is not mentioned, contact Xylem or the Authorised Distributor.

Only for models 1HM06S/N, 3HM03S/N, 3HM02P, 5HM02S/N and with 0.95 kW motor

8.1.2 Relative air humidity

< 50% at +40°C (104°F).

8.1.3 Elevation

< 1000 m (3280 ft) above sea level.

**NOTICE:**

If the temperature and humidity exceed the stated limits, contact Xylem or the Authorised Distributor.

**NOTICE:**

If the unit is installed at an altitude greater than the stated one, reduce the power output of the motor according to the coefficients below, or replace it with a more powerful one.

8.2 Temperature of pumped liquid

The pressure-temperature diagram in the figure shows the operating limits of the unit. Contact Xylem or the Authorised Distributor for special needs.
8.3 Operating pressure

See *Temperature of pumped liquid* on page 34 for the maximum operating pressure, for the unit model and the temperature of the pumped liquid:

\[ P_{1\text{max}} + P_{\text{max}} \leq P_N \]

- \( P_{1\text{max}} \): Maximum input pressure
- \( P_{\text{max}} \): Maximum generated pressure
- \( P_N \): Maximum operating pressure

8.4 Maximum hourly start-ups

9 Disposal

9.1 Precautions

WARNING:
The unit must be disposed of through approved companies specialised in the identification of different types of materials (steel, copper, plastic, etc.)

WARNING:
It is prohibited to dispose of lubricating fluids and other hazardous substances in the environment.
10 Declarations

10.1 EC Declaration of Conformity (Original)

Xylem Service Italia S.r.l., with headquarters in Via Vittorio Lombardi 14 - 36075 Montecchio Maggiore VI - Italy, hereby declares that the product:
pump unit (see label on SAFETY manual)
fulfils the relevant provisions of the following European Directives:
• Machinery 2006/42/EC (ANNEX II - natural or legal person authorised to compile the technical file: Xylem Service Italia S.r.l.)
• Eco-design 2009/125/EC, Regulation (EC) No 640/2009 & Regulation (EU) No 4/2014 (Motor 3 ~, 50 Hz, PN ≥ 0.75 kW) if IE2 or IE3 marked,
and the following technical standards
Montecchio Maggiore, 11.03.2016
Amedeo Valente
(Director of Engineering and R&D)
rev.02

10.2 EU Conformity Declaration (n. EMCD08)

1. Product / Device model: (see label on SAFETY manual)
2. Name and address of the manufacturer: Xylem Service Italia S.r.l. - Via Vittorio Lombardi 14 -36075 Montecchio Maggiore VI - Italy
3. This declaration of conformity is issued under the sole responsibility of the manufacturer.
4. Object of the declaration: Pump Unit
5. The object of the declaration described above is in conformity with the relevant Union harmonization legislation: 2014/30/EU Directive of 26 February 2014 (electromagnetic compatibility)
6. References to the relevant harmonized standards used or references to the other technical specifications, in relation to which conformity is declared: EN 61000-6-1:2009, EN 61000-6-3:2007+A1:2011
7. Notified body: -
8. Additional information:
Signed for and on behalf of: Xylem Service Italia S.r.l.
Montecchio Maggiore, 11.03.2016

11 Warranty

11.1 Information

For information on the warranty refer to the documentation of the sale contract.
1) The tissue in plants that brings water upward from the roots;
2) a leading global water technology company.

We’re a global team unified in a common purpose: creating advanced technology solutions to the world’s water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.

For more information on how Xylem can help you, go to www.xylem.com
