FEATURES

Design: Capable of grinding municipal, commercial and industrial sewage.

Cutter System: Designed to reduce sewage to a fine slurry.

Impeller: Cast iron, semi-open, non-overloading multi-vane design with pump-out vanes for mechanical seal protection.

Casing: Cast iron, volute type for high efficiency. Adaptable for slide rail system.

Paint: Two coat paint system for superior surface protection.

Float Leakage Sensor (FLS): a small internal float switch is used to detect the presence of water in the stator chamber. Standard on all models.

Leakage Sensor Detector Circuit: The FLS, when activated, will cause the patented 24 volt MiniCAS monitoring relay to signal an alarm and, if desired, stop the pump. The MiniCAS 24 volt relay can be ordered separately for installation in a control panel by a UL or CSA certified panel shop or as a built-in option in our control panel.

NOTE
Control Panel – Recommendations:
Literature May be Found in Catalog Accessory Section
The single-phase models of these grinder pumps require capacitor packs and starting relays which are available as kits: see CentriPro Capacitor Packs, BCPCAP; or built into complete single phase control panels: see CentriPro Single Phase Grinder Control panels, BCP1PGP.
We also have single phase grinder panels for pumps located in Class I, Division I locations, they contain intrinsically safe relays, seal failure circuits and high temperature shut down circuits. See BCP1PC1P Bulletin.
