FEATURES

Single phase pumps now have built-in overload protection. See control panel note on page 3.

**Impeller:** Silicon bronze, multi-vane semi-open, with pump-out vanes for mechanical seal protection. Balanced for smooth operation.

**Grinder Cutter System:** The anti-roping design, hardened cutter is keyed to the motor shaft for positive drive. The cutter ring is specially designed to be reversed when the first side wears out thus doubling its life and reducing maintenance costs. The cutter system is designed and tested to pass items found in normal wastewater.

**Casing:** Heavy duty cast iron, volute type for maximum efficiency. Use with A10-12 guide rail system for ease of installation and maintenance.

**Dual Mechanical Seals:** Silicon carbide vs. silicon carbide outer seal and ceramic vs. carbon inner seal, stainless steel metal parts, BUNA-N elastomers. Upper and lower shaft seals are positioned independently and are separated by an oil-filled chamber. Optional Silicon/Tungsten Carbide outer seal available.

**Optional Seal Sensor Probe:** Located in oil-filled chamber. If pumpage should begin to leak past lower seal it indicates to pump control panel a fault has occurred. Requires optional Seal Fail Circuit in the control panel.

**Fasteners and Pipe Plugs:** 300 series stainless steel.

**AGENCY LISTINGS**  
Tested to UL 778 and CSA 22.2 108 Standards  
By Canadian Standards Association  
File #LR38549

**12GDS 50 Hz**  
SUBMERSIBLE GRINDER PUMP  
DUAL SEAL WITH OPTIONAL SEAL SENSOR PROBE

**Bell & Gossett**  
a xylem brand
APPLICATIONS

Designed for high head sewage applications where a gravity system is not practical. Ideal for pressure sewage systems.

SPECIFICATIONS

Pump:
- Solids handling capabilities: 3” maximum.
- Discharge: 1¼” NPT removable flange.
- Capacities: up to 46 GPM.
- Total heads: up to 106 feet TDH.

Motor:
- 2 HP
- Class “F” insulation
- Rated for continuous duty fully submerged
- Maximum Fluid Temperature: 104° F continuous duty, 140° F intermittent duty

Single Phase:
- 220 volt
- Built-in, auto reset, on-winding motor overload

Three Phase:
- 200, 380 volt
- Class 10 ambient compensated, overload protection required in control panel.

MOTORS

- Fully submerged in oil-filled chamber. High grade turbine oil surrounds motor for more efficient heat dissipation, permanent lubrication of bearings and mechanical seal for complete protection against outside environment.
- Class F insulation
  - Single phase: Motor has built-in overload with automatic reset. Start capacitor, run capacitor and starting relay are required and will be located in the control panel. See “Recommended Control Panels” in chart on this bulletin.
  - Three phase: Overload protection must be provided in starter unit.
- Designed for Continuous Operation: Pump ratings are within the motor manufacturer’s recommended working limits and can be operated continuously without damage when fully submerged.
- Bearings: Upper and lower heavy duty ball bearing construction for precision positioning of parts and to carry thrust loads.
- Power (Sensor) Cables: Severe duty rated, oil and water resistant. Epoxy seal on motor end provides secondary moisture barrier in case of outer jacket damage and to prevent oil wicking. 20 foot standard with optional lengths available.
- O-ring: Assures positive sealing against contaminants and oil leakage.
- Shaft: 300 series stainless steel, keyed design, short overhang for minimum shaft deflection.
- Pump is capable of running dry without damage to mechanical components.
50 Hz Wastewater

FEATURES (continued)

Effective with December 2005 (M05) Date Codes -

Single-Phase 12GDS Pumps Contain a Built-in, Auto Reset Overload.

Important Control Panel Requirements and Notes:

1) See panel bulletin BCP5 for other available options.
2) These pumps require a magnetic contactor, start and run capacitors and a starting relay in the control panel.
3) CP-1GDB Capacitor packs with starting relays are available on product bulletin BCPCAP. They are for certified panel shops to “build” into a custom panel. Field installing capacitor packs into a S10020 or D10020 will negate the UL listing on that panel and is therefore not permissible.

DIMENSIONS

(All dimensions are in inches. Do not use for construction purposes.)

Material Code  Engineering Standard
1003  Cast iron – ASTM A48 Class 30
1179  Silicon bronze – ASTM C87600

Optional Pump Legs
Order No. 4K639 (Set of 3)

NOMENCLATURE DESCRIPTION

1st, 2nd and 3rd Characters - Discharge Size and Type
12GDS = 1¼” discharge, grinder, dual seal

4th Character - Mechanical Seals
5 = silicon carbide/silicon carbide/BUNA – lower seal and carbon/ceramic/BUNA – upper seal (standard)
3 = silicon carbide/tungsten carbide/BUNA – lower seal and carbon/ceramic/BUNA – upper seal (optional)

5th Character - Cycle/RPM
5 = 50 Hz/2900 RPM

6th Character - Horsepower
G = 2 HP

7th Character - Phase/Voltage
1 = single phase, 220 V
6 = three phase, 380 V
9 = three phase, 220 V

8th Character - Impeller Diameter
A = 5¾”, Standard  
B = 5¼"  
C = 4¾"  
D = 4¼"

9th Character - Cord Length (Power and Sensor)
A = 20’ (standard)  
F = 50’  
D = 30’  
J = 100’

10th Character - Options
H = Pilot duty thermal sensors¹ (3 phase only!!)
S = Seal fail, moisture sensing circuit¹
E = Epoxy paint

¹These options add a 2-wire or 4-wire sensor cord to the pump and require optional control panel circuits to operate. See panel options on control panel bulletin BCP5.
