1 Introduction and Safety

1.1 Introduction

Purpose of the manual
The purpose of this manual is to provide the necessary information for working with the unit. Read this manual carefully before starting work.

Read and keep the manual
Save this manual for future reference, and keep it readily available at the location of the unit.

Intended use

**WARNING:**
Operating, installing, or maintaining the unit in any way that is not covered in this manual could cause death, serious personal injury, or damage to the equipment and the surroundings. This includes any modification to the equipment or use of parts not provided by Xylem. If there is a question regarding the intended use of the equipment, please contact a Xylem representative before proceeding.

Other manuals
See also the safety requirements and information in the original manufacturer’s manuals for any other equipment furnished separately for use in this system.

Description of user and installer symbols

<table>
<thead>
<tr>

</tbody>
</table>

1.2 Safety terminology and symbols

About safety messages
It is extremely important that you read, understand, and follow the safety messages and regulations carefully before handling the product. They are published to help prevent these hazards:
- Personal accidents and health problems
- Damage to the product and its surroundings
- Product malfunction

Hazard levels

<table>
<thead>
<tr>
<th>Hazard level</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DANGER:</strong></td>
<td>A hazardous situation which, if not avoided, will result in death or serious injury</td>

1.3 User safety

All regulations, codes, and health and safety directives must be observed.

The site
- Observe lockout/tagout procedures before starting work on the product, such as transportation, installation, maintenance, or service.
- Pay attention to the risks presented by gas and vapors in the work area.
- Always be aware of the area surrounding the equipment, and any hazards posed by the site or nearby equipment.

Qualified personnel
This product must be installed, operated, and maintained by qualified personnel only.

Protective equipment and safety devices
- Use personal protective equipment as needed. Examples of personal protective equipment include, but are not limited to, hard hats, safety goggles, protective gloves and shoes, and breathing equipment.
- Make sure that all safety features on the product are functioning and in use at all times when the unit is being operated.

1.4 Ex-approved products

Follow these special handling instructions if you have an Ex-approved unit.

Personnel requirements
These are the personnel requirements for Ex-approved products in potentially explosive atmospheres:
- All work on the product must be carried out by certified electricians and Xylem-authorized mechanics. Special rules apply to installations in explosive atmospheres.
- All users must know about the risks of electric current and the chemical and physical characteristics of the gas, the vapor, or both present in hazardous areas.
- Any maintenance for Ex-approved products must conform to international and national standards (for example, IEC/EN 60079-17).

Xylem disclaims all responsibility for work done by untrained and unauthorized personnel.

Product and product handling requirements
These are the product and product handling requirements for Ex-approved products in potentially explosive atmospheres:
- Only use the product in accordance with the approved motor data.
- The equipment must never run dry during operation. The volute must be filled with liquid during operation. Dry running during service and inspection is only permitted outside the classified area.
- Before you start work on the product, make sure that the product and the control panel are isolated from the power supply and the control circuit, so they cannot be energized.
- Do not open the product while it is energized or in an explosive gas atmosphere.
- Intrinsically safe circuits are normally required for the automatic level-control system by the level regulator if mounted in zone 0.
- The yield stress of fasteners must be in accordance with the approval drawing and the product specification.
- Do not modify the equipment without approval from an Ex-approved Xylem representative.
- Only use original Xylem spare parts that are provided by an Ex-approved Xylem representative.
- The thermal contacts that are fitted to the stator windings must be connected correctly to a separate motor control circuit and in use. The thermal contacts shall be connected to a monitoring device, which disconnects the power supply immediately upon activation.
1.5 Special hazards

1.5.1 Biological hazards

The product is designed for use in liquids that can be hazardous to your health. Observe these rules when you work with the product:

- Make sure that all personnel who may come into contact with biological hazards are vaccinated against diseases to which they may be exposed.
- Observe strict personal cleanliness.

**WARNING: Biological Hazard**

Infection risk. Rinse the unit thoroughly with clean water before working on it.

1.5.2 Wash the skin and eyes

Follow these procedures for chemicals or hazardous fluids that have come into contact with your eyes or your skin:

<table>
<thead>
<tr>
<th>Condition</th>
<th>Action</th>
</tr>
</thead>
</table>
| Chemicals or hazardous fluids in eyes | 1. Hold your eyelids apart forcibly with your fingers.  
2. Rinse the eyes with eyewash or running water for at least 15 minutes.  
3. Seek medical attention. |
| Chemicals or hazardous fluids on skin | 1. Remove contaminated clothing.  
2. Wash the skin with soap and water for at least 1 minute.  
3. Seek medical attention, if necessary. |

1.6 Protecting the environment

Emissions and waste disposal

Observe the local regulations and codes regarding:

- Reporting of emissions to the appropriate authorities
- Sorting, recycling and disposal of solid or liquid waste
- Clean-up of spills

Guidelines for compliance

Compliance is fulfilled only when you operate the unit within its intended use. Do not change the conditions of the service without the approval of an Ex-approved Xylem representative. When you install or maintain explosion proof products, always comply with the directive and applicable standards (for example, IEC/EN 60079-1).

Minimum permitted liquid level

See the dimensional drawings of the product for the minimum permitted liquid level according to the approval for explosion proof products. If the information is missing on the dimensional drawing, the product must be fully submerged. Level-sensing equipment must be installed if the product can be operated at less than the minimum submersion depth.

Monitoring equipment

For additional safety, use condition-monitoring devices. Examples of condition-monitoring devices include, but are not limited to, the following:

- Level indicators
- Temperature detectors in addition to the stator thermal detectors

Any thermal detectors or thermal protection devices delivered with the pump must be installed and in use at all times.

1.7 End of life product disposal

Handle and dispose of all waste in compliance with local laws and regulations.

EU only: Correct disposal of this product — WEEE Directive on waste electrical and electronic equipment

This marking on the product, accessories or literature indicates that the product should not be disposed of with other waste at the end of its working life.

To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable use of material resources.

Waste from electrical and electronic equipment can be returned to the producer or distributor.

1.8 Spare parts

**CAUTION:**

Only use the manufacturer’s original spare parts to replace any worn or faulty components. The use of unsuitable spare parts may cause malfunctions, damage, and injuries as well as void the warranty.

1.9 Warranty

For information about warranty, see the sales contract.

2 Transportation and Storage

2.1 Examine the delivery

2.1.1 Examine the package

1. Examine the package for damaged or missing items upon delivery.
2. Record any damaged or missing items on the receipt and freight bill.
3. If anything is out of order, then file a claim directly to the distributor.

2.1.2 Examine the unit

1. Remove packing materials from the product.
2. Dispose of all packing materials in accordance with local regulations.
3. To determine whether any parts have been damaged or are missing, examine the product.
4. If applicable, unfasten the product by removing any screws, bolts, or straps.
5. Use care around nails and straps.
6. If there is any issue, then contact a sales representative.

Exceptional sites

**CAUTION: Radiation Hazard**

Do NOT send the product to Xylem if it has been exposed to nuclear radiation, unless Xylem has been informed and appropriate actions have been agreed upon.

1305 Installation, Operation, and Maintenance Manual
2.2 Transportation guidelines

2.2.1 Precautions

DANGER: Crush Hazard
Moving parts can entangle or crush. Always disconnect and lock out power before servicing to prevent unexpected start-up. Failure to do so could result in death or serious injury.

Position and fastening
The unit can be transported either horizontally or vertically. Make sure that the unit is correctly fastened during transportation, and cannot roll or fall over.

2.2.2 Lifting
Always inspect the lifting equipment and tackle before starting any work.

WARNING: Crush Hazard
Always lift the unit by its designated lifting points. Use suitable lifting equipment and ensure that the product is properly harnessed. Wear personal protective equipment. Stay clear of cables and suspended loads.

NOTICE:
Never lift the unit by its cables or hose.

Lifting equipment
Lifting equipment is always required to handle the unit. The lifting equipment must fulfill the following requirements:

- The minimum height between the lifting hook and the floor must be sufficient to lift the unit. Contact a Xylem representative for more information.
- The lifting equipment must be able to hoist the unit straight up and down, preferably without the need for resetting the lifting hook.
- The lifting equipment must be correctly anchored and in good condition.
- The lifting equipment must support the weight of the entire assembly. Only authorized personnel may use the lifting equipment.
- Two sets of lifting equipment must be used to lift the unit for repair work.
- The lifting equipment must be dimensioned to lift the unit with any remaining pumped media in it.
- The lifting equipment must not be oversized.

CAUTION: Crush Hazard
Over-dimensioned lifting equipment can lead to injury. A site-specific risk analysis must be done.

2.3 Temperature ranges for transportation, handling and storage

Handling at freezing temperature
At temperatures below freezing, the product and all installation equipment, including the lifting gear, must be handled with extreme care. Make sure that the product is warmed up to a temperature above the freezing point before starting up. Avoid rotating the impeller/propeller by hand at temperatures below the freezing point. The recommended method to warm the unit up is to submerge it in the liquid which will be pumped or mixed.
DANGER: Explosion/Fire Hazard
Special rules apply to installations in explosive or flammable atmospheres. Do not install the product or any auxiliary equipment in an explosive zone unless it is rated explosion-proof or intrinsically-safe. If the product is rated explosion-proof or intrinsically-safe, then see the specific explosion-proof information in the safety chapter before taking any further actions.

NOTICE:
Do NOT use the unit in highly corrosive liquids.

Spare parts
- Modifications to the unit or installation should only be carried out after consulting with Xylem.
- Original spare parts and accessories that are authorized by Xylem are essential for compliance. The use of other parts can invalidate any claims for warranty or compensation. For more information contact your Xylem representative.

</tr>
</tbody>
</table>

3.3 Monitoring Equipment
The following applies to the monitoring equipment of the pump:
- The stator incorporates thermal contacts that are connected in series that activate the alarm at overtemperature.
- The thermal contacts open at 125°C (257°F).
- Ex-approved pumps must have thermal contacts that are connected to the control panel.
- The sensors must be connected to either the SMR 311 monitoring equipment or equivalent equipment.
- The monitoring equipment must be of a design that makes automatic restart impossible.
- Information in the junction box shows if the pump is equipped with optional sensors

Optional sensors
LD    LD is a miniature float switch for detection of liquid in the stator housing. Due to its design, it is best suited for pumps in a vertical position. The LD sensor is installed in the bottom of the stator housing.

3.4 The data plate
The data plate is a metal label that is located on the main body of the products. The data plate lists key product specifications. Specially approved products also have an approval plate.

1. Curve code or Propeller code
2. Serial number
3. Product number

4 Installation

4.1 Precautions

Before starting work, make sure that the safety instructions in the chapter *Introduction and Safety* on page 3 have been read and understood.

**DANGER: Electrical Hazard**
Before starting work on the unit, make sure that the unit and the control panel are isolated from the power supply and cannot be energized. This applies to the control circuit as well.

**DANGER: Inhalation Hazard**
Before entering the work area, make sure that the atmosphere contains sufficient oxygen and no toxic gases.

4.1.1 Hazardous atmospheres

**DANGER: Explosion/Fire Hazard**
Special rules apply to installations in explosive or flammable atmospheres. Do not install the product or any auxiliary equipment in an explosive zone unless it is rated explosion-proof or intrinsically-safe. If the product is rated explosion-proof or intrinsically-safe, then see the specific explosion-proof information in the safety chapter before taking any further actions.

**General requirements**
These requirements apply:
- Use the pump dimensional drawing in order to ensure proper installation.

Before installing the pump, do the following:
- Provide a suitable barrier around the work area, for example, a guard rail.
- Make sure that equipment is in place so that the unit cannot roll or fall over during the installation process.
- Check the explosion risk before you weld or use electric hand tools.
- Check that the cable and cable entry have not been damaged during transport.
- Always check the impeller rotation before lowering the pump into the pumped liquid.

**NOTICE:**
Do not run the pump dry.

**NOTICE:**
Never force piping to make a connection with a pump.

**Authority regulation**
Vent the tank of a sewage station in accordance with local plumbing codes.

**Fasteners**
- Only use fasteners of the correct size and material.
- Replace all corroded or damaged fasteners.
- Make sure that all the fasteners are correctly tightened and that there are no missing fasteners.

4.1.2 Install with Wet well installation

In the wet-well installation, the pump is installed on a stationary discharge connection, and operates either completely or partially submerged in the pumped liquid. These requirements and instructions only apply when the installation is made according to the dimensional drawing.
These items are required:

- Guide bars
- Guide bar bracket for attaching the guide equipment to the access frame or to the upper part of the sump
- Level regulators or other control equipment for start, stop, and alarm
- Cable holder for holding the cable and regulating the height of the level regulators
- Access frame (with covers) to which the upper guide bar bracket and cable holder can be attached
- Discharge connection for connecting the pump to the discharge line
- Fasteners for the discharge connection
- Anchor bolts

1. Run a cable between the sump and the stator and monitoring equipment. Make sure that the cable is not sharply bent or pinched.

2. Install the access frame:
   a) Place the access frame in position and align it horizontally.
   b) Grout the frame in place.

3. Grout the anchor bolts in place. Be careful when you align and position the discharge connection in relation to the access frame.

4. Place the discharge connection in position, and tighten the nuts.

5. Install the guide bars:
   a) Secure the guide bars in the bracket.
   b) Check that the guide bars are placed vertically. Use a level or a plumb line.

6. Connect the discharge pipe to the discharge connection.

7. Prepare for the level regulator:
   a) Bolt the cable holder to the access frame.
   b) Attach the level regulator cable to the cable holder and adjust the height of the level regulator.
   c) Protect bolts and nuts with a corrosion-preventive compound.

8. Lower the pump along the guide bars.

9. Secure the motor cable:
   a) Fasten the permanent lifting device to the pump and to the access frame. For example, you can use a stainless-steel lifting chain with shackles.
   b) Fasten the cable to the cable holder. Make sure that the cable cannot be sucked into the pump inlet or that it is neither sharply bent, or pinched. Support straps are required for deep installations.
   c) Connect the motor cable and the starter and monitoring equipment according to the separate instructions. Make sure that the impeller rotation is correct. For more information, see Check the impeller rotation on page 13.

Clean all debris from the sump before starting the pump.

### 4.1.3 Install with Free-standing installation

In the Free-standing installation, the pump is transportable and intended to operate either completely or partially submerged in the pumped liquid. The pump is equipped with a connection for hose or pipe and stands on a base stand.

The stand is integrated with the pump housing and the hose is connected to pump using thread coupling.

These requirements and instructions only apply when the installation is made according to the dimensional drawing.

1. Run the cable so that it has no sharp bends. Make sure that it is not pinched, and cannot be sucked into the pump inlet.

2. Connect the discharge line.

3. Lower the pump into the sump.

4. Place the pump on the base and make sure it cannot fall over or sink. Alternatively, the pump can be suspended with a lifting chain just above the sump bottom. Make sure that the pump cannot rotate at startup or during operation.

5. Connect the motor cable and the starter and monitoring equipment according to the separate instructions. Make sure that the impeller rotation is correct. For more information, see Check the impeller rotation on page 13.
4.2 Make the electrical connections

4.2.1 General precautions

DANGER: Electrical Hazard
Before starting work on the unit, make sure that the unit and the control panel are isolated from the power supply and cannot be energized. This applies to the control circuit as well.

WARNING: Electrical Hazard
Risk of electrical shock or burn. A certified electrician must supervise all electrical work. Comply with all local codes and regulations.

WARNING: Electrical Hazard
There is a risk of electrical shock or explosion if the electrical connections are not correctly made, or if there is fault or damage on the product. Visually inspect equipment for damaged cables, cracked casings or other signs of damage. Make sure that electrical connections have been correctly made.

WARNING: Crush Hazard
Risk of automatic restart.

CAUTION: Electrical Hazard
Prevent cables from becoming sharply bent or damaged.

NOTICE:
Leakage into the electrical parts can cause damaged equipment or a blown fuse. Keep the cable ends dry at all times.

Requirements
These general requirements apply for the electrical installation:
- If the pump will be connected to the public mains, then the supply authority must be notified before installing the pump. When the pump is connected to the public power supply, it can cause flickering of incandescent lamps when started.
- The mains voltage and frequency must agree with the specifications on the data plate. If the pump can be connected to different voltages, then follow the specified voltage on the yellow sticker close to the cable entry.
- If the operation can be intermittent, then the pump must be supplied with monitoring equipment supporting such operation.
- If stated on the data plate, then the motor is convertible between different voltages.
- The thermal contacts or thermistors must be in use.

Motor and short-circuit protection
A qualified electrician must select the size of motor protection breakers and fuses, so that it is sufficient for the specific motor data such as rated current and starting current.

It is important that the short-circuit protection is not over-dimensional. Over-dimensional fuses and motor protection breakers decrease the protection for the motor.
- The fuse rating and the cables must be in accordance with the local rules and regulations.
- The fuses and circuit breakers must have the correct rating. The pump overload protection must be connected and set to the rated current. See the data plate and if applicable the cable chart for the rated current. The starting current in direct-on-line start can be up to six times higher than the rated current.

4.2.2 Grounding (earthing)
Grounding (earthing) must be done in compliance with all local codes and regulations.

DANGER: Electrical Hazard
All electrical equipment must be grounded (earthed). Test the ground (earth) lead to verify that it is connected correctly and that the path to ground is continuous.

WARNING: Electrical Hazard
If the power cable is jerked loose, then the ground (earth) conductor must be the last conductor to come loose from its terminal. Make sure that the ground (earth) conductor is longer than the phase conductors at both ends of the cable.

WARNING: Electrical Hazard
Risk of electrical shock or burn. You must connect an additional ground-(earth-) fault protection device to the grounded (earthed) connectors if persons are likely to come into contact with liquids that are also in contact with the pump or pumped liquid.

4.2.3 Prepare the SUBCAB™ cables
This section applies to SUBCAB™ cables with twisted-pair control cores.

Cables
These are the requirements to follow when you install cables:
- The cables must be in good condition, not have any sharp bends, and not be pinched.
- The cables must not be damaged and must not have indentations or be embossed (with markings, etc.) at the cable entry.
- The cable entry seal sleeve and washers must conform to the outside diameter of the cable.
- The minimum bending radius must not be below the accepted value.
- If using a cable which has been used before, a short piece must be peeled off when refitting it so that the cable entry seal sleeve does not close around the cable at the same point again. If the outer sheath of the cable is damaged, then replace the cable.
- Contact a sales or authorized service representative.
- The voltage drop in long cables must be taken into account. The drive unit’s rated voltage is the voltage measured at the cable connection point in the pump.
- For SUBCAB™ cables, the twisted pair copper foil must be trimmed.
- All unused conductors must be insulated.

The prepared SUBCAB™ cable
- 1. T1+T2 twisted pairs in control element
- 2. Drain wire in control element (tinned copper strands) with shrink hose
- 3. Aluminum and textile layers
- 4. Insulation sheath or plastic jacket, for the control element
- 5. Power cores
- 6. Ground (earth) core with yellow-green shrink hose

The prepared screened SUBCAB™ cable, without cable lugs
- 1. T1+T2 and T3+T4 twisted pairs in control element
- 2. Drain wire in control element (tinned copper strands) with shrink hose
- 3. Aluminum and textile layers
- 4. Insulation sheath or plastic jacket, for the control element
- 5. Power cores
- 6. Plastic laminated aluminum foil, screen
- 7. Ground (earth) core with yellow-green shrink hose
- 8. Uncovered screen/braided wire
- 9. Shrink hose
1. Peel off the outer sheath at the end of the cable.

2. Prepare the control element:
   a) Peel the insulation sheath or plastic jacket.
   b) Peel the aluminum and textile layers.

   The aluminum foil is a conductive screen. Do not peel more than necessary, and remove the peeled foil.

3. Prepare the ground (earth) core of the SUBCAB™ cable:
   a) Peel the yellow-green insulation from the ground (earth) core.
   b) Check that the ground (earth) core is at least 10% longer than the phase cores in the cabinet.
   c) If applicable, put a cable lug on the ground core.

4. Prepare the ground (earth) core of the screened SUBCAB™ cable:
   a) Untwist the screens around the power cores.
   b) Twist all power core screens together to create a ground (earth) core.
   c) Put a yellow-green shrink hose over the ground (earth) core.
   Leave a short piece uncovered.
   d) Check that the connected ground (earth) core has sufficient slack. The core must stay connected even if the power cores are pulled loose.

5. Prepare the power cores:
   a) Remove the aluminum foil around each power core.
   b) Peel the insulation from each power core.

6. Prepare the ends of the ground (earth) core, the power cores, and the drain wire:

<table>
<thead>
<tr>
<th>Connection type</th>
<th>Action</th>
</tr>

<tbody>
<tr>
<td>Screw</td>
<td>Fit cable lugs to the ends.</td>
</tr>
<tr>
<td>Terminal block</td>
<td>Fit end sleeves or leave the ends as they are.</td>
</tr>
</tbody>
</table>

4.2.4 Connect the motor cable to the pump

**NOTICE:**
Leakage into the electrical parts can cause damaged equipment or a blown fuse. Keep the end of the motor cable dry at all times.

1. Remove the entry gland screw from the stator housing.
2. Remove the stator housing.
   This provides access to the terminal block/closed end splices.
3. Check the data plate to see which connections are required for the power supply.
4. Arrange the connections on the terminal block/closed end splices in accordance with the required power supply.
5. Connect the mains leads (L1, L2, L3, and ground (earth)) according to applicable cable chart.
   The ground (earth) lead must be 50 mm (2.0 in.) longer than the phase conductors in the junction box of the unit.
6. Make sure that the pump is correctly connected to ground (earth).
7. Make sure that any thermal contacts incorporated in the pump are properly connected to the terminal block/closed end splices.

4.2.5 Connect the motor cable to the starter and monitoring equipment

**DANGER: Explosion/Fire Hazard**
Special rules apply to installations in explosive or flammable atmospheres. Do not install the product or any auxiliary equipment in an explosive zone unless it is rated explosion-proof or intrinsically-safe. If the product is rated explosion-proof or intrinsically-safe, then see the specific explosion-proof information in the safety chapter before taking any further actions.

**NOTICE:**
Thermal contacts are incorporated in the pump.

**NOTICE:**
Thermal contacts must never be exposed to voltages higher than 250 V, breaking current maximum 5 A.

1. If thermal contacts are included in the pump installation, then connect the T1 and T2 control conductors to the MiniCAS II monitoring equipment.
   If the temperature of the pumped liquid is above 40°C (104°F), then do not connect the T1 and T2 leads to thermal contacts.

**NOTICE:**
The thermal contacts are incorporated in the stator. Connect them to 24 V over separate fuses to protect other automatic equipment.

2. Connect the mains leads (L1, L2, L3, and ground (earth)) to the starter equipment.
   For information about the phase sequence and the color codes of the leads, see Cable charts.
3. Check the functionality of the monitoring equipment:
   a) Check that the signals and the tripping function work correctly.
   b) Check that the relays, lamps, fuses, and connections are intact.
   Replace any defective equipment.

4.2.6 Cable charts

**Description**
This topic contains general connection information. It also provides cable charts that show connection alternatives for use with different cables and power supply.
Connection locations
The figures in this section illustrate how to interpret the connection strip symbols.

1. Stator leads
2. Terminal board
3. Motor cable leads
4. Stator (internal connection illustrated)

1. Starter equipment and mains leads (L1, L2, L3)
2. Ground (earth)
3. Functional ground
4. Control leads (T1, T2, T3, T4)
5. Thermal contact
6. Leakage detector (LD)
7. Thermistor
8. Level sensor
9. Capacitor

4.3 Check the impeller rotation

**CAUTION: Crush Hazard**

The starting jerk can be powerful. Make sure nobody is close to the unit when it is started.

1. Start the motor.
2. Stop the motor after a few seconds.
3. Check that the impeller rotates according to this illustration.

The correct direction of impeller rotation is clockwise when you look at the pump from above.

4. If the impeller rotates in the wrong direction, then do one of these steps:
   - If the motor has a 1-phase connection, then contact a sales or authorized service representative.
   - If the motor has a 3-phase connection, then transpose two phase leads and do this procedure again.

5  Operation

5.1 Precautions

Before taking the unit into operation, check the following:
- All recommended safety devices are installed.
- The cable and cable entry have not been damaged.
- All debris and waste material has been removed.

**NOTICE:**
Never operate the pump with the discharge line blocked, or the discharge valve closed.

**WARNING:** The starting jerk can be powerful. Make sure nobody is close to the unit when it is started.

1. Check the coolant level in the oil housing.
2. Remove the fuses or open the circuit breaker, and check that the impeller can rotate freely.

**WARNING:** Never put your hand into the pump housing.

3. Conduct insulation test phase to ground. To pass, the value must exceed 5 megaohms.
4. Start the pump.

5.2 Start the pump

**CAUTION: Crush Hazard**

The starting jerk can be powerful. Make sure nobody is close to the unit when it is started.

**NOTICE:**
Make sure that the rotation of the impeller is correct. For more information, see Check the impeller rotation.

1. Check the coolant level in the oil housing.
2. Remove the fuses or open the circuit breaker, and check that the impeller can rotate freely.

**WARNING:** Crush Hazard

Never put your hand into the pump housing.

3. Conduct insulation test phase to ground. To pass, the value must exceed 5 megaohms.
4. Start the pump.

6  Maintenance

6.1 Precautions

Before starting work, make sure that the safety instructions in the chapter Introduction and Safety on page 3 have been read and understood.

**DANGER:** Crush Hazard

Moving parts can entangle or crush. Always disconnect and lock out power before servicing to prevent unexpected startup. Failure to do so could result in death or serious injury.

**WARNING:** Inhalation Hazard

Before entering the work area, make sure that the atmosphere contains sufficient oxygen and no toxic gases.

**WARNING:** Biological Hazard

Infection risk. Rinse the unit thoroughly with clean water before working on it.

**CAUTION:** Crush Hazard

Make sure that the unit cannot roll or fall over and injure people or damage property.

Make sure that you follow these requirements:
- Check the explosion risk before you weld or use electrical hand tools.
- Allow all system and pump components to cool before you handle them.
- Make sure that the product and its components have been thoroughly cleaned.
• Before starting work, make sure that the work area is well-ventilated.
• Do not open any vent or drain valves or remove any plugs while the system is pressurized. Make sure that the pump is isolated from the system and that pressure is relieved before you disassemble the pump, remove plugs, or disconnect piping.

Ground continuity verification
A ground (earth) continuity test must always be performed after service.

Maintenance guidelines
During the maintenance and before reassembly, always remember to perform these tasks:
• Clean all parts thoroughly, particularly O-ring grooves.
• Change all O-rings, gaskets, and seal washers.
• Lubricate all springs, screws, O-rings with grease.
During the reassembly, always make sure that existing index markings are in line.
The reassembled drive unit must always be insulation-tested and the reassembled pump must always be test-run before normal operation.

6.2 Change the coolant
This image shows the plug that is used to change the coolant.

6.2.1 Empty the coolant

CAUTION: Compressed Gas Hazard
Air inside the chamber may cause parts or liquid to be propelled with force. Be careful when opening. Allow the chamber to de-pressurize before removal of the plug.

1. To empty the coolant with the pump upright, do the following:
   a) Remove the coolant plug.
   b) Use a pump to remove the coolant.
2. If it is necessary to separate the drive unit from the hydraulic unit, then do the following:
   a) Carefully open the coolant plugs to relieve any built-up pressure inside the cooling jacket.
   b) After venting any built-up pressure in the cooling jacket, re-install the coolant plugs.
   c) Remove the pump housing screws.
   d) Remove the drive unit from the pump housing.

NOTICE:
Do not allow the weight of the pump to rest on any portion of the impeller. The impeller must not be allowed to make contact with the concrete floor or other hard or rough surfaces.

3. To empty the coolant with the pump in a horizontal position, do the following:
   a) Place the pump horizontally, so that the coolant plug is at the lowest point of the pump, to ensure that the coolant will drain completely.
   b) Place a container under the pump.
   c) Remove the coolant plug and empty the coolant.

6.2.2 Fill with coolant
Use oil as coolant. The oil should be a paraffin oil with viscosity close to ISO VG32. Examples of suitable oil types are the following:
• Statoil MedicWay 32™
• BP Enerpar M 004™
• Shell Ondina 927™
• Shell Ondina X430™

1. Fill with coolant.
   Quantity: approximately 0.4 liters (0.4 quarts)

2. Replace the O-ring of the coolant plug.

3. Refit the coolant plug and tighten.
   Tightening torque: 10-40 Nm (7.5–29.5 ft-lbs)
6.3 Service the pump

<table>
<thead>
<tr>
<th>Type of maintenance</th>
<th>Purpose</th>
<th>Inspection interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial inspection</td>
<td>A Xylem-authorized personnel checks the pump condition. From the results, the personnel recommends the intervals for the periodic inspection and overhaul for the installation.</td>
<td>Within the first year of operation.</td>
</tr>
<tr>
<td>Periodical inspection</td>
<td>The inspection prevents operational interruptions and machine breakdowns. The measures to increase performance and pump efficiency are decided for each application. They can include such things as impeller trimming, wear part control and replacement, control of zinc-anodes and control of the stator.</td>
<td>Up to every year. Applies to normal applications and operating conditions at medium (liquid) temperatures &lt;40°C (104°F).</td>
</tr>
<tr>
<td>Overhaul</td>
<td>The overhaul lengthens the operating lifetime of the product. It includes the replacement of key components and the measures that are taken during an inspection.</td>
<td>Up to every two years. Applies to normal applications and operating conditions at medium (liquid) temperatures &lt;40°C (104°F).</td>
</tr>
</tbody>
</table>

NOTICE:
Shorter intervals may be required when the operating conditions are extreme, for example with very abrasive or corrosive applications or when the liquid temperatures exceed 40°C (104°F).

6.3.1 Inspection

<table>
<thead>
<tr>
<th>Service item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cable</td>
<td>1. If the outer jacket is damaged, then replace the cable. 2. Check that the cables do not have any sharp bends and are not pinched.</td>
</tr>
<tr>
<td>Connection to power</td>
<td>Check that the connections are properly secured.</td>
</tr>
<tr>
<td>Electrical cabinets</td>
<td>Check that they are clean and dry.</td>
</tr>
<tr>
<td>Impeller</td>
<td>1. Check the impeller clearance. 2. Adjust the impeller, if necessary.</td>
</tr>
<tr>
<td>Stator housing</td>
<td>1. Drain all liquid, if any. 2. Check the resistance of the leakage sensor. Normal value approximately 1530 ohms, alarm approximately 330 ohms.</td>
</tr>
<tr>
<td>Insulation</td>
<td>Use a megger maximum 1000 V. 1. Check that the resistance between the ground (earth) and phase lead is more than 5 megohms. 2. Conduct a phase-to-phase resistance check.</td>

<td>Fill with new coolant, if necessary.</td>
</tr>
</tbody>
</table>

6.3.2 Overhaul

The basic repair kit includes O-rings, seals, and bearings. For an overhaul, do the following in addition to the tasks listed under Inspection.

<table>
<thead>
<tr>
<th>Service item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Support and main bearing</td>
<td>Replace the bearings with new bearings.</td>
</tr>
<tr>
<td>Mechanical seal</td>
<td>Replace with new seal units.</td>
</tr>
</tbody>
</table>

6.3.3 Service in case of alarm

For information about indication values for sensors, see Sensor connection characteristics on page 12.

<table>
<thead>
<tr>
<th>Alarm source</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>LD</td>
<td>1. Check for liquid in the stator housing. 2. Drain all liquid, if any. 3. Check the mechanical seal unit, the O-rings, and the cable entry, if liquid was found.</td>
</tr>
<tr>
<td>Thermal contact</td>
<td>Check the start and stop levels.</td>
</tr>
<tr>
<td>Overload protection</td>
<td>Check that the impeller can rotate freely.</td>
</tr>
</tbody>
</table>

6.4 Replace the impeller

Required tools:
- 6 hexagon bit adapter with an extension of at least 125 mm (4.92 in.)
- Impeller puller
  If applicable, contact your local sales and service representative for correct type and size.
- Rod (wood or copper) for locking the impeller in place, if applicable
- Two crowbars, if applicable

NOTICE:
- When laying the pump on its side, do not allow the weight of the pump to rest on any portion of the impeller. The impeller must not be allowed to make contact with the concrete floor or other hard and rough surfaces.

CAUTION: Cutting Hazard
Worn parts can have sharp edges. Wear protective clothing.

6.4.1 Remove the impeller

1. Remove the suction cover:
   a) Place the pump horizontally.
   b) Remove the suction cover screws.
   c) Remove the suction cover from the pump housing.

2. Remove the impeller:
   a) Remove the impeller screw.
   b) Remove the impeller and the conical sleeve.

6.4.2 Install the impeller

1. Prepare the shaft:
   a) Polish off any flaws with a fine emery cloth.
   b) Coat the inner cone, the outer cylindrical surfaces, and the thread of the conical sleeve with a thin layer of grease.
The proper lubrication is grease for bearings, for example Exxon Mobil Unirex N3, Mobil Mobilith SHC 220 or equivalent.

**NOTICE:**

Surplus grease can cause the impeller to become loose. Remove surplus grease from conical and/or cylindrical surfaces of shafts and/or sleeves.

2. Lubricate the threads of the impeller screw and the washer, if any.
3. Fit the impeller.

<table>
<thead>
<tr>
<th>Impeller type</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-clog</td>
<td>Fit the conical sleeve, the washer, and the impeller screw to the shaft.</td>
</tr>
</tbody>
</table>
| Vortex        | 1. Fit the conical sleeve to the shaft.  
                2. Fit the impeller and impeller screw to the shaft. |

5. Fit the suction cover:
   a) Lubricate the suction cover screws.
   b) Place the suction cover on the pump housing and fit the screws.
   c) Tighten the screws in a diagonal sequence.
   d) Check that the impeller rotates freely.

6. Adjust the clearance.

<table>
<thead>
<tr>
<th>Impeller type</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-clog</td>
<td>Adjust the clearance between the lower edge of the impeller and the pump housing by sliding the impeller on the shaft until it touches the pump housing.</td>
</tr>
<tr>
<td>Vortex</td>
<td>No adjustment or clearance check is needed. Go to step 8 on page 16</td>
</tr>
</tbody>
</table>

4. Fasten the impeller.

<table>
<thead>
<tr>
<th>Impeller type</th>
<th>Action</th>
</tr>
</thead>
</table>
| Non-clog      | Hand-tighten the impeller screw enough to prevent it from falling off.  
                Do not fasten the impeller until the clearance has been adjusted in step 6 on page 16. |

5. The clearance (A): 0.2–0.8 mm (0.008–0.032 in.)

7. **WARNING:** Crush Hazard

   Beware of the pinch point hazard between the rotating impeller and the guide pin.

6. Check that the impeller can rotate freely.
7 Troubleshooting

7.1 Electrical troubleshooting

DANGER: Electrical Hazard
Troubleshooting a live control panel exposes personnel to hazardous voltages. Electrical troubleshooting must be done by a qualified electrician.

Follow these guidelines when troubleshooting:
- Disconnect and lock out the power supply except when conducting checks that require voltage.
- Make sure that no one is near the unit when the power supply is re-connected.
- When troubleshooting electrical equipment, use the following:
  - Universal instrument multimeter
  - Test lamp (continuity tester)
  - Wiring diagram

7.2 The pump does not start

DANGER: Crush Hazard
Moving parts can entangle or crush. Always disconnect and lock out power before servicing to prevent unexpected start-up. Failure to do so could result in death or serious injury.

NOTICE:
Do NOT override the motor protection repeatedly if it has tripped. Doing so may result in equipment damage.

<table>

If the problem persists, then contact a sales or authorized service representative.

Always state the serial number of the product, see Product Description on page 5.
7.5 The pump runs but the motor protection trips

DANGER: Crush Hazard
Moving parts can entangle or crush. Always disconnect and lock out power before servicing to prevent unexpected start-up. Failure to do so could result in death or serious injury.

NOTICE:
Do NOT override the motor protection repeatedly if it has tripped. Doing so may result in equipment damage.

<table>
<thead>
<tr>
<th>Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The motor protection is set too low.</td>
<td>Set the motor protection according to the data plate and if applicable the cable chart.</td>
</tr>
<tr>
<td>The impeller is difficult to rotate by hand.</td>
<td>• Clean the impeller.</td>
</tr>
<tr>
<td></td>
<td>• Clean out the sump.</td>
</tr>
<tr>
<td></td>
<td>• Check that the impeller is properly trimmed.</td>
</tr>
<tr>
<td>The drive unit is not receiving full voltage on all three phases.</td>
<td>• Check the fuses. Replace fuses that have tripped.</td>
</tr>
<tr>
<td></td>
<td>• If the fuses are intact, then notify a certified electrician.</td>
</tr>
<tr>
<td>The phase currents vary, or they are too high.</td>
<td>Contact a sales or authorized service representative.</td>
</tr>
<tr>
<td>The insulation between the phases and ground in the stator is defective.</td>
<td>1. Use an insulation tester. With a 1000 V DC megger, check that the insulation between the phases and between any phase and ground is &gt; 5 megaohms.</td>
</tr>
<tr>
<td></td>
<td>2. If the insulation is less, then do the following:</td>
</tr>
<tr>
<td></td>
<td>• Contact a sales or authorized service representative.</td>
</tr>
<tr>
<td>The density of the pumped fluid is too high.</td>
<td>Make sure that the maximum density is 1100 kg/m³ (9.2 lb/US gal)</td>
</tr>
<tr>
<td></td>
<td>• Change the impeller, or</td>
</tr>
<tr>
<td></td>
<td>• Change to a more suitable pump</td>
</tr>
<tr>
<td></td>
<td>• Contact a sales or authorized service representative.</td>
</tr>
<tr>
<td>There is a malfunction in the overload protection.</td>
<td>Replace the overload protection.</td>
</tr>
</tbody>
</table>

If the problem persists, then contact a sales or authorized service representative.
Always state the serial number of the product, see Product Description on page 5.

7.6 The pump delivers too little or no water

DANGER: Crush Hazard
Moving parts can entangle or crush. Always disconnect and lock out power before servicing to prevent unexpected start-up. Failure to do so could result in death or serious injury.

NOTICE:
Do NOT override the motor protection repeatedly if it has tripped. Doing so may result in equipment damage.

<table>
<thead>
<tr>
<th>Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The impeller rotates in the wrong direction.</td>
<td>• If it is a 3-phase pump, then transpose two phase leads.</td>

<tr>
<td></td>
<td>• If it is a 1-phase pump, then do the following:</td>
</tr>
<tr>
<td></td>
<td>• Contact a sales or authorized service representative.</td>
</tr>
<tr>
<td>One or more of the valves are set in the wrong positions.</td>
<td>• Reset the valves that are set in the wrong position.</td>
</tr>
<tr>
<td></td>
<td>• Replace the valves, if necessary.</td>
</tr>
<tr>
<td></td>
<td>• Check that all valves are correctly installed according to media flow.</td>
</tr>
<tr>
<td></td>
<td>• Check that all valves open correctly.</td>
</tr>
<tr>
<td>The impeller is difficult to rotate by hand.</td>
<td>• Clean the impeller.</td>
</tr>
<tr>
<td></td>
<td>• Clean out the sump.</td>
</tr>
<tr>
<td></td>
<td>• Check that the impeller is properly trimmed.</td>
</tr>
<tr>
<td>The pipes are obstructed.</td>
<td>To ensure a free flow, clean out the pipes.</td>
</tr>
<tr>
<td>The pipes and joints leak.</td>
<td>Find the leaks and seal them.</td>
</tr>
<tr>
<td>There are signs of wear on the impeller, pump, and casing.</td>
<td>Replace the worn parts.</td>
</tr>
<tr>
<td>The liquid level is too low.</td>
<td>• Check that the level sensor is set correctly.</td>
</tr>
<tr>
<td></td>
<td>• Depending on the installation type, add a means for priming the pump, such as a foot valve.</td>
</tr>
</tbody>
</table>

If the problem persists, then contact a sales or authorized service representative.
Always state the serial number of the product, see Product Description on page 5.

8 Technical Reference

8.1 Motor data

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Motor type</td>
<td>Squirrel-cage induction motor</td>
</tr>
<tr>
<td>Frequency</td>
<td>50 Hz or 60 Hz</td>
</tr>
<tr>
<td>Supply</td>
<td>1-phase or 3-phase</td>
</tr>
<tr>
<td>Starting method</td>
<td>Direct on-line</td>
</tr>
<tr>
<td>Maximum starts per hour</td>
<td>15 evenly-spaced starts per hour</td>
</tr>
</tbody>
</table>
### Feature Description

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voltage variation without overheating</td>
<td>±10%, if it does not run continuously at full load</td>
</tr>
<tr>
<td>Voltage imbalance tolerance</td>
<td>2%</td>
</tr>
<tr>
<td>Stator insulation class</td>
<td>F (155°C [311°F])</td>
</tr>
</tbody>
</table>

### Motor encapsulation

Motor encapsulation is in accordance with IP68.

### Application limits

<table>
<thead>
<tr>
<th>Data</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Liquid temperature</td>
<td>Maximum 40°C (104°F)</td>
</tr>
<tr>
<td>Liquid density</td>
<td>1100 kg/m³ (9.2 lb per US gal) maximum</td>
</tr>
<tr>
<td>pH of the pumped media (liquid)</td>
<td>5.5-14 for cast iron pumps</td>
</tr>
<tr>
<td>Depth of immersion</td>
<td>Maximum 20 m (65 ft)</td>
</tr>
<tr>
<td>Other</td>
<td>For the specific weight, current, voltage, power ratings, and speed of the pump, see the data plate of the pump.</td>
</tr>

Xylem |’zīləm|

1) The tissue in plants that brings water upward from the roots;
2) a leading global water technology company.

We’re a global team unified in a common purpose: creating advanced technology solutions to the world’s water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
